DAY 6 - DEPLOYMENT PREPARATION AND STAGING ENVIRONMENT SETUP

Platforms I used:

Hosting platform: Vercel

version control on: GitHub

CMS: Sanity

How Did I Deploy My Project

- After finishing code run commands
  1. `npm run build`
  2. `npm run start`
  3. `npm run lint`
- After setting it up to .next, push it on GitHub
  1. `git add .`
  2. `git commit -m "your message"`
  3. `git push -u origin main`
- After pushing it to GitHub go to GitHub > See code
- Code it pushed
- Now go to Vercel
- And then deploy it to Vercel
- It will show an error
- Go back to project dashboard > Setting > Environment variable
- In environment section upload. env. local file
- Then go back to dashboard > Deployment
- On latest deployment click "…"
- Select Redeploy
- Conform it
- Your project is now deploy successfully
